# Synthesis and antitumor activities of 3-substituted-analine derivatives: structure modifications of Tuv part of tubulysins 

Mingsha Shao, Xinfa Bai, Xuan Ma, Ning Yan and Lei Yao*

#### Abstract

Background: Tubulysins family is a kind of natural compound with potent, antitumor activity. To simplify the synthesis route and find new antitumor compounds is becoming a hotspot of research recent years. Results: Starting from 3-nitrobenzoic acid, after 7 steps transformations, 12 new tubulysin analogues were synthesized by the conformational restraint and bioisostere principle. These structures are featuring 3 -substituted analine moieties. All these compounds are new compounds, and the structures were characterized by ${ }^{1} \mathrm{HNMR},{ }^{13} \mathrm{C}$ NMR, and HRMS. The antitumor activities were screened by the MTT method using MDA-MB-231 and MCF7 cells. Conclusions: Compound Ilb exhibited certain antitumor activity with the $\mathrm{IC}_{50}$ value of 7.6 and $11.8 \mu \mathrm{M}$ against MDA-MB-231 and MCF7 cells respectively. Compounds Ila-Ile had moderate antitumor activities suggested that the thiazole ring in the Tuv could be replaced by the phenyl ring. However, Compounds la-le lose antitumor activity dramatically suggested that the conformation of the Tuv was crucial for the tubulysin analogues to maintain the biological activity.

Keywords: Tubulysin, Analogues, Synthesis, Antitumor activity

## Background

Tubulysins (Fig. 1) are natural tetrapeptides isolated by Höfle in 2001 [1]. They possess potent antitumor activities by binding to tubulin near the vinca alkaloid binding site and inhibiting tubulin polymerization [1]. The average $\mathrm{IC}_{50}$ against mammalian cancer cells ranged from 0.01 to 10 nM [2]. Due to the high potency and limited availability, there have been several total synthesis routes reported ever since the first total synthesis of tubulysin D by Ellman's group [3-5]. In 2009, Pretubulysin (Fig. 1), the precursor to tubulysin, was found by Müller from Angiococcus disciformis [6]. Although it was less potent than the tubulysin, the anticancer activities still retained subnanomolar level [7-9]. The extraordinary anticancer

[^0]activity of tubulysin and pretubulysin against a validated target makes them exciting leads for the development of novel drugs for multidrug-resistant cancers.

## Results and discussion

## Chemistry

Some issues, such as less lipophilicity, large molecular weight ( $>700$ ) and too many stereocenters, have hampered tubulysin from becoming a commercial drug. In our lab, efforts were taken to modify the structure of tubulysin in order to increase the lipophilicity and decrease the numbers of stereocenters. In all the total synthesis routes of tubulysin, one of the biggest challenges was to build the Tuv part. Utilizing conformational restrain principle, a new series of tubulysin analogues were designed by cyclization and aromatization of the $i$-propyl group and $\mathrm{R}_{2}$ group into a phenyl ring (Scheme 1). Some advantages, like decreasing numbers of stereocenters, increasing lipophilicity, and simplifying the synthesis, were obvious to this series of compounds.

Fig. 1 Structures of tubulysins and pretubulysin

Starting from commercially available ethyl 2-aryl-4-thi-azole-carboxylate (1), after three steps transformation, compound 3 was obtained. The l-phenylalanine was chosen instead of the Tup in the tubulysin, because a previous structure-activity-relationship study showed that the Tup had little effect on the antitumor activity [10, 11]. After two classical peptide coupling reactions and one hydrolysis reaction, compound Ia-Ie were obtained in moderate yields. To fulfill our design, $L$-leucine and benzoic acids were used in the peptide coupling. Compared with tubulysins, this series of compounds were relatively

Scheme2 Synthesis of tubulysin derivatives Ila-llg
low molecular weight (around 550), and less stereocenters (Scheme 1).

Inspired by the structure of pretubulysin, compounds IIa-IIg (Scheme 2) were designed and synthesized. In these compounds, peptide bonds were adopted as the linker to connect the Tuv and Tup parts, instead of the ethylene group in pretubulysin. Besides the thiazole group, a phenyl group was also used according to the bioisosterism principle. Another reason that a phenyl group was used was because there were at most 4 positions could be utilized to introduce substituents to modify the pharmacokinetic profiles of the compounds.
The syntheses of compounds IIa-IIg started from 3-nitrobenzoic acid or 2-bromo-5-nitro-benzoic acid. After the amide bond formation reaction and hydrogenation reaction, compound 4 was obtained and used in the next step to couple with Boc-L-Val directly to obtain compound 5. Then, by classical peptide coupling conditions, the Leu part and $N$-Mep part were installed subsequently utilizing classical peptide coupling reaction.

## Antitumor activity

Human cancer cell lines Siha, PC3 and MKN45 were cultured in RPMI-1640 media supplemented with $10 \%$ fetal calf serum, penicillin ( $100 \mathrm{U} / \mathrm{mL}$ ) and streptomycin $(100 \mu \mathrm{~g} / \mathrm{mL})$ (Gibco BRL, NY, USA), and incubated at $37^{\circ} \mathrm{C}$ in a humidified air atmosphere containing $5 \% \mathrm{CO}_{2}$. All cells were harvested in their exponentially growing phase.
Cell viability was measured using (MTT) assay. Briefly, Cells were seeded in 96-well multi-plates at a density of $4 \times 10^{4} / \mathrm{mL}$. After incubated overnight, triplicate wells were exposed to vehicle and test agents for 72 h . MTT solution ( $5 \mathrm{mg} / \mathrm{mL}$ ) was added to each well and incubated continued for 4 h . DMSO was added to dissolve the MTT formazan product and the absorbance was measured at 570 nm using a Molecular Devices SpectraMax M5 (Molecular Devices, USA). The relative cell viability rates were calculated versus untreated controls. The 50\% inhibitory concentration $\left(\mathrm{IC}_{50}\right)$ values were calculated using the Graph Pad Prism 5 (Graph Pad Software, Inc., USA). The antitumor activities of all the synthesized compounds were listed in Table 1.
The antitumor activities of compound Ia-Ie were not as expected, while compounds IIa-IIe had moderate antitumor activities. This suggests that the conformation of the Tuv and Tup parts was crucial to the antitumor activity. In compounds Ia-Ie, due to the conformational restraint, the Tuv part and Tup part were co-planar and separated far apart, which led to weak or no interaction with tublin. However, in tubulysins and compounds IIa-IIe, the ethylene or amide bond linker can freely rotate, which results in the Tuv and Tup parts binding better with tublin. This

Table 1 The antitumor activities of the compounds la-IIg

observation was consistent with previously reported results of THP-tubulysins [12, 13]. On the other hand, Tamura [14] reported that cyclotubulysin, an analog with a $\mathrm{N}, \mathrm{O}$-acetal ring generated from $\mathrm{C}-11$ alcohol and $\mathrm{N}-14$, had a similar antitumor activity with vinblastine. This also suggests that the conformation of Tuv and Tup part was crucial to the antitumor activity. Previous SAR studies showed that the entire Tup residue was not essential for activity [10]. In order to simply the synthesis, $L$-Phe was arbitrarily selected in this study. However, according to Ullrich's findings [15], compounds IIa-IIe would increase the activities by replacement of $L$-Phe with Tup. The reason why compound IIf and IIg had no activities is not clear yet. Although more work is needed to increase the potency, this work shows at the very least that the phenyl ring could be used to replace the thiozole ring of the Tuv.

## Conclusions

Compound IIb exhibited certain antitumor activity with the $\mathrm{IC}_{50}$ value of 7.6 and $11.8 \mu \mathrm{M}$ against MDA-MB-231 and MCF7 cells respectively. Compounds IIa-IIe had moderate antitumor activities suggested that the thiazole ring in the Tuv could be replaced by the phenyl ring. However, Compounds Ia-Ie lose antitumor activity dramatically suggested that the conformation of the Tuv was crucial for the tubulysin analogues to maintain the biological activity.

## Experimental section

## Chemistry

Reactions employed oven- or flame-dried glassware under nitrogen unless otherwise noted. Thin layer chromatography (TLC) employed glass 0.25 mm silica gel plates with UV indicator. Flash chromatography columns were packed with 230-400 mesh silica gel as a slurry in the initial elution solvent. Gradient flash chromatography was conducted by adsorption of product mixtures on silica gel, packing over a short pad of clean silica gel as a slurry in hexane, and eluting with a continuous gradient as indicated. Nuclear magnetic resonance (NMR) data were obtained at operating frequencies indicated in the
text and are reported in units of ppm. Infrared spectra were recorded using a single beam FT-IR spectrophotometer by standard transmission method. Low and high resolution mass spectra (TOF) were obtained from local instrumentation facilities services.

## (S)-Ethyl 2-(2- (3-amiophenyl)thia-

## zole-4-carboxamido)-3-phenylpropanoate (2)

Step 1: To a solution of compound $\mathbf{1}(5.56 \mathrm{~g}, 20 \mathrm{mmol})$ in 60 mL THF: $\mathrm{H}_{2} \mathrm{O}$ (1:1), was added NaOH aqueous solution ( $2.40 \mathrm{~g}, 60 \mathrm{mmol}$ ) at room temperature. The reaction mixture was allowed to stir at room temperature for 10 h till TLC showed that starting material all consumed. The solvent was removed by vaccum, the residue was adjusted the pH to 2 by $10 \% \mathrm{HCl}$. The white precipitate was isolated and washed with water, dried and used in next step with further purification. Step 2: The solid obtained in last step was dissolved in 100 mL DCM, $\mathrm{SOCl}_{2}(4.5 \mathrm{~mL}, 60 \mathrm{mmol})$ and 0.5 mL DMF was added at room temperature. The reaction mixture was allowed to stir at reflux condition for 4 h . The excess $\mathrm{SOCl}_{2}$ and DCM were removed under reduced pressure. The residue was diluted with 50 mL DCM and added through an additional funnel to a solution of $L$-Phe-OEt ( 3.86 g , $20 \mathrm{mmol}), \mathrm{Et}_{3} \mathrm{~N}(6.06 \mathrm{~g}, 60 \mathrm{mmol})$ in 100 mL DCM at 0 degree. The reaction mixture was allowed to stir at 0 degree for 30 min , then room temperature for 1 h . Water was added the reaction mixture, the aqueous layer was extracted with DCM ( $100 \mathrm{~mL} \times 3$ ). The organic layers were combined and dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$. The solvent was filtered, concentrated to afford pale yellow oil, which afforded a white solid after recrystallization from a cosolvent of EA/methanol. Yield: $87 \%{ }^{1} \mathrm{H}$ NMR $(400 \mathrm{MHz}$, $\mathrm{CDCl}_{3}$ ) $\delta: 8.79$ (t, $J=1.9,1 \mathrm{H}$ ), 8.34 (ddd, $J=8.2,2.2,0.9$, $1 \mathrm{H}), 8.29-8.22(\mathrm{~m}, 1 \mathrm{H}), 8.20(\mathrm{~s}, 1 \mathrm{H}), 7.84(\mathrm{~d}, J=8.2,1 \mathrm{H})$, 7.69 ( $\mathrm{t}, J=8.0,1 \mathrm{H}$ ), 7.40-7.34 (m, 2H), 7.34-7.30 (m, $1 \mathrm{H}), 7.27-7.23(\mathrm{~m}, 2 \mathrm{H}), 5.07(\mathrm{dt}, J=8.2,6.1,1 \mathrm{H}), 4.23$ (q, $J=7.1,2 H), 3.38-3.22(\mathrm{~m}, 2 \mathrm{H}), 1.28$ (t, $J=7.1,3 H)$. Step3. The above solid $7.40 \mathrm{~g}(17.4 \mathrm{mmol})$ was dissolved in MeOH ,then about $0.5 \mathrm{~g} \mathrm{Pd} / \mathrm{C}(10 \%)$ was added. The reaction mixture was allowed to stir at $35{ }^{\circ} \mathrm{C}$ for 7 h under $\mathrm{H}_{2}(0.3 \mathrm{MPa})$ condition. After the reaction completed, the catalyst was removed by passing through a pad of celit, the filtrate was concentrated, and the residue ( 6.87 g brown solid) was used in next step directly.

## (S)-Ethyl 2-(2-(3-((S)-2-((tert-butoxycarbonyl)amino)-4-meth-ylpentanamido)phenyl)thiazole-4-carboxamido)-3-phenylpropanoate (3)

To a solution of Boc-L-Leu ( $4.02 \mathrm{~g}, 17.4 \mathrm{mmol}$ ) dissolved in 40 mL DCM, was added EDC ( $5.01 \mathrm{~g}, 26.1 \mathrm{mmol}$ ), HOBt ( $2.35 \mathrm{~g}, 17.4 \mathrm{mmol}$ ), and 1 mL DIPEA at room temperature. The reaction mixture was allowed to stir at
room temperature for 1 h ,then a solution of compound $4(6.87 \mathrm{~g}, 17.4 \mathrm{mmol})$ in 20 mL DCM was added dropwisely. The reaction mixture stirred for 12 h at room temperature. Water 100 mL was added to the reaction mixture and the aqueous layer was extracted with DCM ( $100 \mathrm{~mL} \times 3$ ). The organic layers were combined, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered and concentrated. The residue (pale yellow oil 10 g ) was purified by chromatography (EA: $\mathrm{PE}=1: 4$ ) to afford white solid 8.46 g , yield: $80 \%{ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta: 9.44(\mathrm{~s}, 1 \mathrm{H}), 8.49(\mathrm{~d}, J=7.6$, $1 \mathrm{H}), 7.92(\mathrm{~s}, 1 \mathrm{H}), 7.84(\mathrm{~s}, 1 \mathrm{H}), 7.74(\mathrm{~d}, J=7.8,1 \mathrm{H}),$, (d, $J=7.3,1 \mathrm{H}), 7.29(\mathrm{~s}, 2 \mathrm{H}), 7.26-7.21(\mathrm{~m}, 1 \mathrm{H}), 7.18(\mathrm{~d}$, $J=7.6,1 \mathrm{H}), 5.75(\mathrm{~s}, 1 \mathrm{H}), 5.17$ (dd, $J=15.0,7.2,1 \mathrm{H}), 4.53$ $(\mathrm{s}, 1 \mathrm{H}), 4.23(\mathrm{q}, J=7.1,2 \mathrm{H}), 3.41-3.22(\mathrm{~m}, 2 \mathrm{H}), 2.02(\mathrm{~d}$, $J=15.8,1 \mathrm{H}$ ), 1.82 (ddd, $J=25.6,13.7,7.0,3 \mathrm{H}), 1.46-1.36$ (m, 9H), $1.26(\mathrm{t}, J=7.1,4 \mathrm{H}), 1.03(\mathrm{dd}, J=13.3,6.3,6 \mathrm{H})$.

## General synthesis method for compound la-le

Step 1: To a solution of D-N-Methyl-2-pipecolinic acid ( $0.04 \mathrm{~g}, 0.26 \mathrm{mmol}$ ) in 4 mL DCM, was added EDC ( $0.08 \mathrm{~g}, 0.39 \mathrm{mmol}$ ), HOBt ( $0.04 \mathrm{~g}, 0.26 \mathrm{mmol}$ ), 0.5 mL DIPEA at $0^{\circ} \mathrm{C}$. The reaction mixture was stirred for 1 h at room temperature. Meanwhile, a solution of compound 3 ( $0.16 \mathrm{~g}, 0.26 \mathrm{mmol}$ ) in 4 mL TFA was allowed to stir at room temperature for 3 h . The excess TFA was removed under reduced pressure, the residue was dissolved in 5 mL DCM and 0.5 mL DIPEA. This solution was added to above reaction mixture under $20^{\circ} \mathrm{C}$. The reaction mixture was allowed to stir overnight at room temperature. Water 50 mL was added to reaction mixture, the aqueous layer was extracted with $\mathrm{DCM}(40 \mathrm{~mL} \times 3)$. The organic layers were combined, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered and concentrated. The residue was purified by chromatography ( $\mathrm{EA}: \mathrm{PE}=1: 4$ ) to afford white solid 0.13 g , yield: $81 \%$.
Step 2: To a solution of above solid $0.11 \mathrm{~g}(0.17 \mathrm{mmol})$ in THF: $\mathrm{H}_{2} \mathrm{O}=1: 1(10 \mathrm{~mL}, \mathrm{v}: \mathrm{v})$, was added $\mathrm{LiOH}(0.02 \mathrm{~g}$, $0.83 \mathrm{mmol})$. The reaction mixture was allowed to stir at room temperature till TLC showed that all starting material consumed. Solvent was removed under reduced pressure, the residue was diluted with water 50 mL , and adjusted with $10 \% \mathrm{HCl}$ to $\mathrm{pH}=2$, extracted with DCM ( $40 \mathrm{~mL} \times 3$ ). The organic layers were combined, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered and concentrated. The residue was purified by chromatography (Chloroform: $\mathrm{MeOH}=7: 1$ ) to afford white solid 80 mg , yield: $77 \% .{ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CD}_{3} \mathrm{OD}\right.$, 400 MHz ) $\delta: 8.19(\mathrm{~s}, 1 \mathrm{H}), 8.07(\mathrm{~s}, 1 \mathrm{H}), 7.61(\mathrm{dd}, J=16.0$, $8.0,2 \mathrm{H}), 7.35(\mathrm{t}, \mathrm{J}=7.9,1 \mathrm{H}), 7.16(\mathrm{dd}, J=17.6,7.2,4 \mathrm{H})$, $7.08(\mathrm{t}, J=6.8,1 \mathrm{H}), 4.66-4.59(\mathrm{~m}, 1 \mathrm{H}), 4.45(\mathrm{dd}, J=9.8$, $4.6,1 \mathrm{H}), 3.30-3.25(\mathrm{~m}, 1 \mathrm{H}), 2.97(\mathrm{~m}, 1 \mathrm{H}), 2.69(\mathrm{~s}, 3 \mathrm{H})$, $1.83(\mathrm{~m}, 3 \mathrm{H}), 1.66(\mathrm{~m}, 6 \mathrm{H}), 1.51(\mathrm{~d}, J=12.5,2 \mathrm{H}), 1.33-$ $1.14(\mathrm{~m}, 1 \mathrm{H}), 0.91(\mathrm{dd}, J=10.8,6.1,6 \mathrm{H})$; HRMS calcd for $\mathrm{C}_{32} \mathrm{H}_{39} \mathrm{~N}_{5} \mathrm{O}_{5} \mathrm{~S}[\mathrm{M}+\mathrm{H}]^{+} 606.2750$, found 606.2755.

Ib: white solid, yield: $80 \%{ }^{1}{ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CD}_{3} \mathrm{OD}, 400 \mathrm{MHz}\right)$ $\delta: 8.29(\mathrm{~s}, 1 \mathrm{H}), 8.16(\mathrm{~d}, J=2.5,1 \mathrm{H}), 7.71(\mathrm{~d}, J=6.6,1 \mathrm{H})$, $7.64(\mathrm{t}, J=7.3,1 \mathrm{H}), 7.44(\mathrm{t}, J=7.9,1 \mathrm{H}), 7.31-7.22(\mathrm{~m}$, $4 \mathrm{H}), 7.19$ (d, $J=6.5,1 \mathrm{H}), 4.63$ (m, 1H), 4.45 (dd, $J=9.8$, $4.6,1 \mathrm{H}), 3.30-3.25(\mathrm{~m}, 1 \mathrm{H}), 2.97$ (m, 1H), 2.69 (s, 3H), $1.83(\mathrm{~m}, 3 \mathrm{H}), 1.66(\mathrm{~m}, 6 \mathrm{H}), 1.51(\mathrm{~d}, J=12.5,2 \mathrm{H}), 1.33-$ $1.14(\mathrm{~m}, 1 \mathrm{H}), 0.91$ (dd, $J=10.8,6.1,6 \mathrm{H}) ;{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CD}_{3} \mathrm{OD}, 100 \mathrm{MHz}\right) \delta: 20.3,22.0,24.7,29.6,37.9,40.5$, 42.8, 52.6, 54.3, 55.2, 55.9, 68.4, 115.3, 117.5, 118.2, 121.8, 123.2, 126.1, 127.8, 129.3, 133.2, 137.7, 139.1, 150.2, 161.0, 161.4, 161.7, 167.9, 171.9; HRMS calcd for $\mathrm{C}_{32} \mathrm{H}_{39} \mathrm{~N}_{5} \mathrm{O}_{5} \mathrm{~S}$ $[\mathrm{M}+\mathrm{H}]^{+} 606.2750$, found 606.2755 .

(S)-Methyl 2-(3-aminobenzamido)-3-phenylpropanoate (4)

Step 1: To a solution of 3 nitrobenzoic acid ( 16.71 g , $100 \mathrm{mmol})$ in 200 mL DCM, was added $\mathrm{SOCl}_{2}(14 \mathrm{~mL}$, 200 mmol ) and 0.5 mL DMF at room temperature. The reaction mixture was allowed to stir at reflux condition for 5 h . The excess solvent was removed under reduced
pressure, the residue was diluted with DCM 50 mL , and added via an additional funnel to a solution of $L$-PheOMe ( $17.91 \mathrm{~g}, 100 \mathrm{mmol}$ ), $\mathrm{Et}_{3} \mathrm{~N}(30.6 \mathrm{~g}, 300 \mathrm{mmol})$ in DCM 100 mL at $0^{\circ} \mathrm{C}$. The reaction mixture was allowed to stir at $0^{\circ} \mathrm{C}$ for 0.5 h , and then room temperature for 1 h till TLC showed that the reaction completed. Water 200 mL was added to the reaction mixture, the aqueous was extracted with DCM ( $150 \mathrm{~mL} \times 3$ ). The organic layers were combined, dried, filtered, and concentrated. The residue was re-crystallized from a co-solvent of ethyl acetate and methanol (1:6) to afford a white solid 29.19 g (yield $89 \%$ ) and used in next step directly. Step 2: To a solution of above compound ( $29.15 \mathrm{~g}, 88.9 \mathrm{mmol}$ ) in 200 mL methanol, was added $1 \mathrm{~g} \mathrm{Pd} / \mathrm{C}(10 \%)$. The reaction mixture was allowed to stir under $\mathrm{H}_{2}(0.3 \mathrm{MPa})$ condition at $35{ }^{\circ} \mathrm{C}$ for 7 h . The reaction mixture was filtered through a pad of Celite, the filtration was concentrated to afford a gray solid 27.77 g as crude product, which was purified via re-crystallization from methanol and ethyl acetate (1:5) $24.77 \mathrm{~g}(93 \%) .{ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta$ 7.30-7.33 (m, 4H), 7.17-7.22 (m, 4H), 7.13-7.15 (m,1H), $6.89(\mathrm{~m}, 1 \mathrm{H}), 6.38(\mathrm{~m}, 1 \mathrm{H}), 5.10-5.12(\mathrm{~m}, 1 \mathrm{H}), 3.80(\mathrm{~s}$, 3 H ), 3.31 (dd, $J=14.0,5.8 \mathrm{~Hz}, 1 \mathrm{H}$ ), 3.24 (dd, $J=14.0$, $5.9 \mathrm{~Hz}, 1 \mathrm{H}) .{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 100 \mathrm{MHz}\right) \delta: 37.9,52.4$, $53.5,113.9,116.7,118.3,127.2,128.6,129.3,135.0,135.5$, 135.8, 146.5, 167.0, 172.0; HRMS calcd for $\mathrm{C}_{17} \mathrm{H}_{18} \mathrm{~N}_{2} \mathrm{O}_{3}$ $[\mathrm{M}+\mathrm{H}]^{+}$299.1317, found 299.1314.

## (S)-Methyl 2-(5-amino-2-bromobenzamido)-3-phenylpropanoate (4a)

Made by the same method as described in compound 4. ${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta 7.30-7.34(\mathrm{~m}, 6 \mathrm{H})$, 7.21-7.26 (m, 1H), $6.68(\mathrm{~s}, 1 \mathrm{H}), 6.61-6.65(\mathrm{~m}, 2 \mathrm{H}), 5.09-$ $5.13(\mathrm{~m}, 1 \mathrm{H}), 3.81(\mathrm{~s}, 3 \mathrm{H}), 3.22-3.36(\mathrm{~m}, 2 \mathrm{H}) .{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 100 \mathrm{MHz}\right) \delta: 37.8,51.8,53.7,116.0,117.9,122.0$, $127.2,128.6,129.4,133.8,134.2,167.0,146.6,166.5$, 171.2; HRMS calcd for $\mathrm{C}_{17} \mathrm{H}_{17} \mathrm{BrN}_{2} \mathrm{O}_{3}[\mathrm{M}+\mathrm{H}]^{+}$377.0423, found 377.0418.
(S)-Methyl 2-(3-((S)-2-(9 (tert-butoxycarbonyl)amino)-3-meth-ylbutanamido)benzamido)-3-phenylpropanoate (5)
To a solution of Boc-L-Val ( $8.68 \mathrm{~g}, 40.0 \mathrm{mmol}$ ) in 60 mL DCM, was added EDC ( $9.98 \mathrm{~g}, 52.0 \mathrm{mmol}$ ), HOBt $(5.40 \mathrm{~g}$, 40.0 mmol ), and 3 mL DIPEA at $0{ }^{\circ} \mathrm{C}$. The reaction mixture was allowed to stir room temperature for 1 h . Then a solution of compound $6(11.92 \mathrm{~g}, 40.0 \mathrm{mmol})$ in DCM was added to above reaction mixture. The resulting reaction mixture was stirred at room temperature for 1 h . Water 150 mL was added, and the aqueous layer was extracted with DCM ( $120 \mathrm{~mL} \times 3$ ). The organic layers were combined, dried, filtered, and concentrated. The residue was purified by a chromatography ( $\mathrm{EA}: \mathrm{PE}=1: 4$ ) to afford white solid 16.70 g (yield: $84 \%$ ). ${ }^{1} \mathrm{H}$ NMR

## Additional file

Additional file 1. The ${ }^{1} \mathrm{HNMR}$ and ${ }^{13} \mathrm{CNMR}$ spectra of key intermediates and final products were listed.

## Abbreviations

EDC: 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride; TFA: trifluoroacetic acid; DIPEA: $\mathrm{N}, \mathrm{N}$-diisopropylethylamine; HOBt: 1-hydroxybenzotriazole; DCM: dichloromethane; Boc-L-Val: $N$-Boc-L-Valine; Boc-L-Leu: $N$-Boc-L-Leucine; L-Phe-OEt: L-phenylalanine ethyl ester; DMF: $N, N$-dimethylformamide.

## Authors' contributions

The main part of the work was carried out by SM, with the direct supervision of LY. Conceptually the work was designed by XB, XM and NY. All authors read and approved the final manuscript.

## Acknowledgements

The authors would like to thank Dr. Hongbo Wang for his very helpful discussions concerning the pharmacological test.

## Competing interests

The authors declare that they have no competing interests.

## Availability of data and materials

Not applicable.

## Consent for publication

All authors read and approved the final manuscript
Ethics approval and consent to participate
Not applicable.

## Funding

Doctor Foundation of Yantai University (YX13B04) and the Shandong Blue Economic Zone Talent Development Project (RS11YX).

## Publisher's Note

Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.

Ready to submit your research? Choose BMC and benefit from:

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100 M website views per year

At BMC, research is always in progress.
